Sharpen your pencil

We've got some more calls to `bark` below. Next to each call, write what you think the output should be, or if you think the code will cause an error. Check your answer at the end of the chapter before you go on.

↖ Write what you think the shell will display here.

`bark('Speedy', 20)` — Speedy says woof woof

`bark('Barnaby', -1)` — Barnaby says woof woof

`bark('Scottie', 0, 0)` — Error:Function need 2 arguments but 3 were given

↙ Hmm, any ideas what these do?

`bark('Lady', "20")` — Error: '>' not supported between 'str' and 'int'

`bark('Spot', 10)` — Spot says woof woof

`bark('Rover', 21)` — Rover says WOOF WOOF
