Time once again to put your pseudocoding skills to use! Go ahead and write some pseudocode that will create the bubble score report. Take each item in the report separately and think of how you'd break it down and generate the right output. Put any notes and your pseudocode here.

1) Print every score to the list with bubble solution (index number).

2) Print the total number of score testing.

3) Sorting scores to find the highest score.

4) Print the highest score.

5) Print the index number where the highest number is.

Do your best and take this as far as you can, and then we'll work through the entire bubble score report together.
