Exercise

Write a quick game. Here's how it works: you prompt the player with "What color am I thinking of?" and you see how many guesses it takes the player to guess it.

```
color = 'blue'
guess = ''
guesses = 0

while guess != color :
    guess = input('What color am I thinking of? ')
    guesses = guesses + 1
print('You got it! It took you', guesses, 'guesses')
```
